

耐性菌の誕生とは？

Evolution of *Staphylococcus aureus*

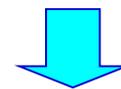

Evolution of Staphylococcus aureus

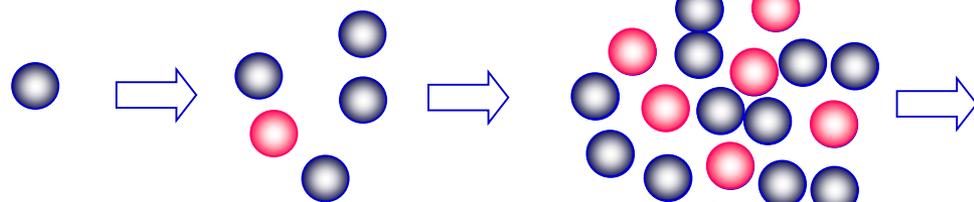

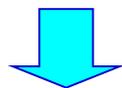

**耐性細胞は自然発生する。
抗菌薬は耐性細胞を選択し、
耐性細胞集団(耐性菌)のみとなる。**

抗菌薬の投与

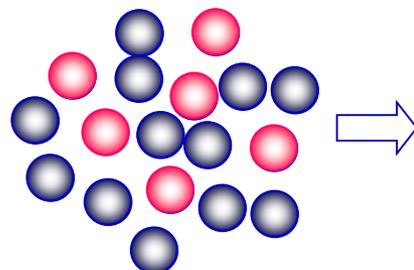

抗菌薬の投与

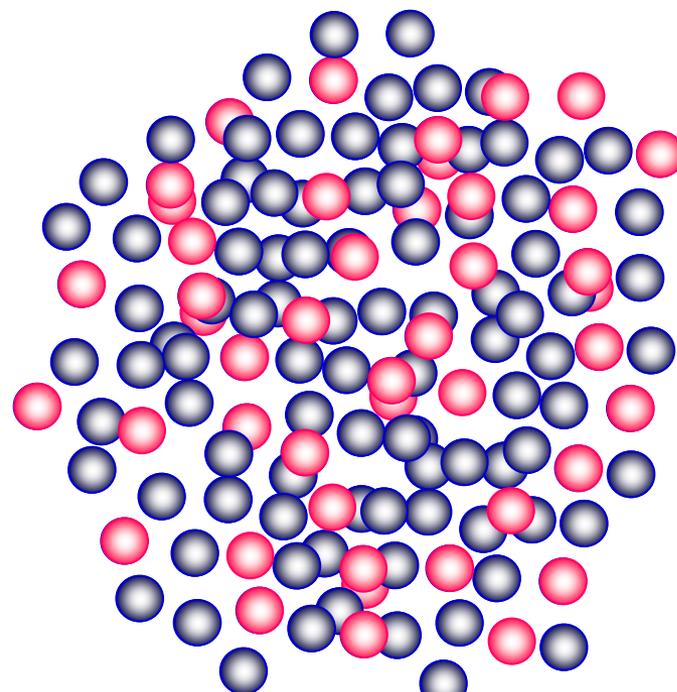

耐性細胞の出現

- ・自己遺伝子の変異
- ・耐性遺伝子の獲得

ヘテロ耐性

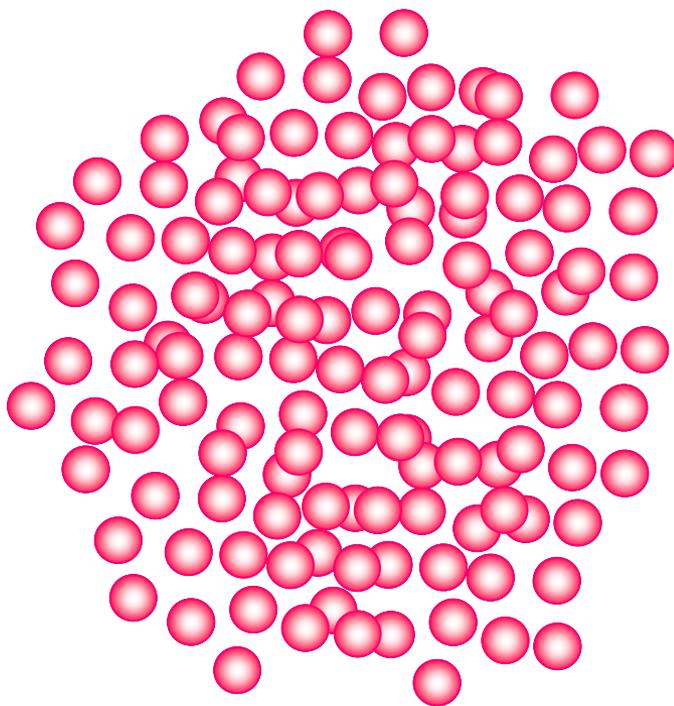

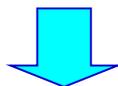

ヘテロ耐性

高度耐性菌の増加は人為的。

抗菌薬の投与中止 or 別系統の抗菌薬に変更すれば感性感化。

高度耐性菌の誕生：人為的

抗菌薬の投与

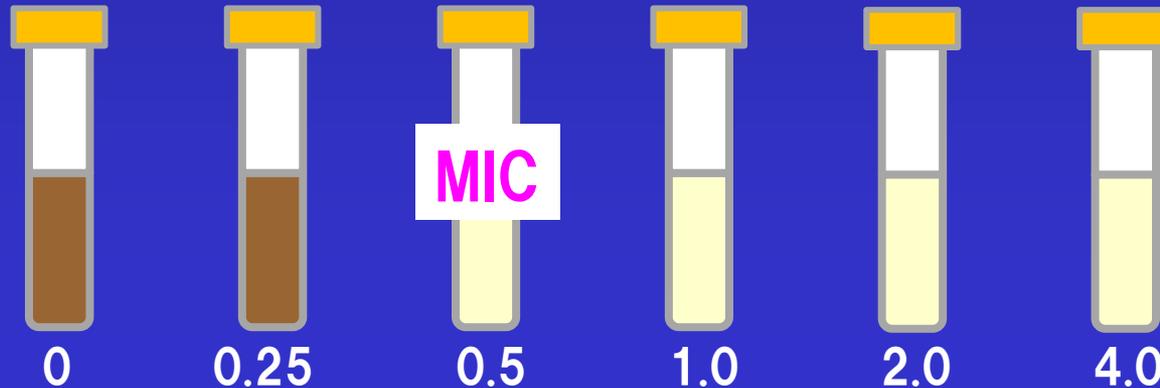

高度耐性

MICの測定方法

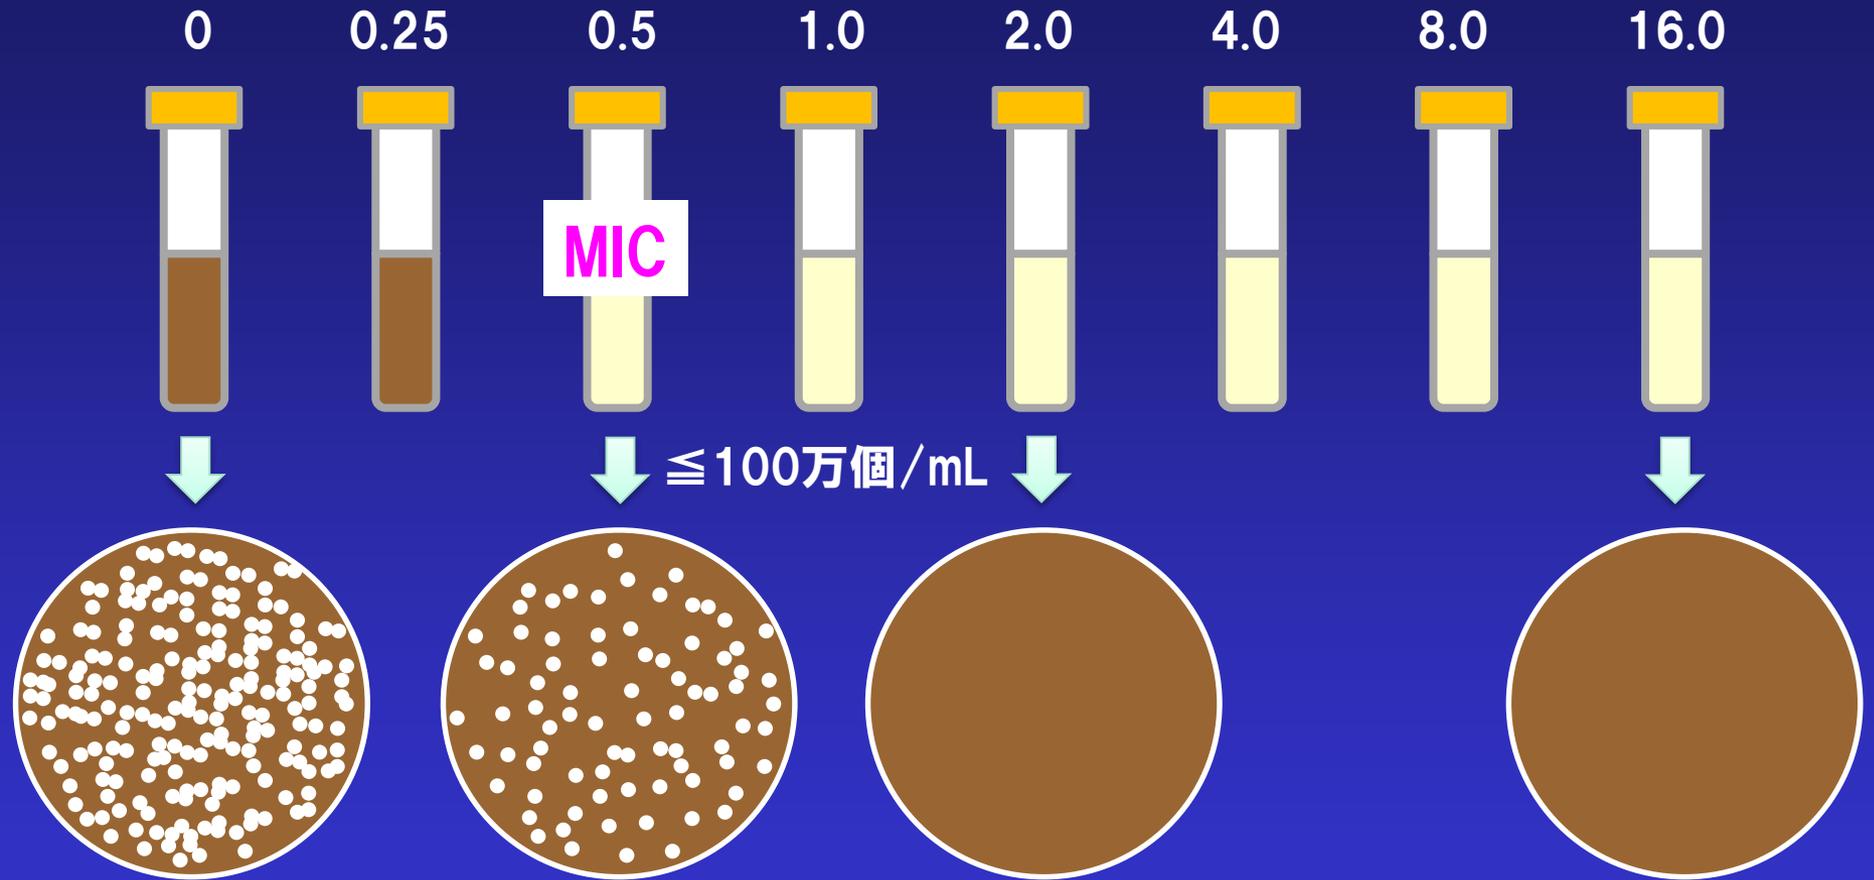

最小発育阻止濃度: MIC

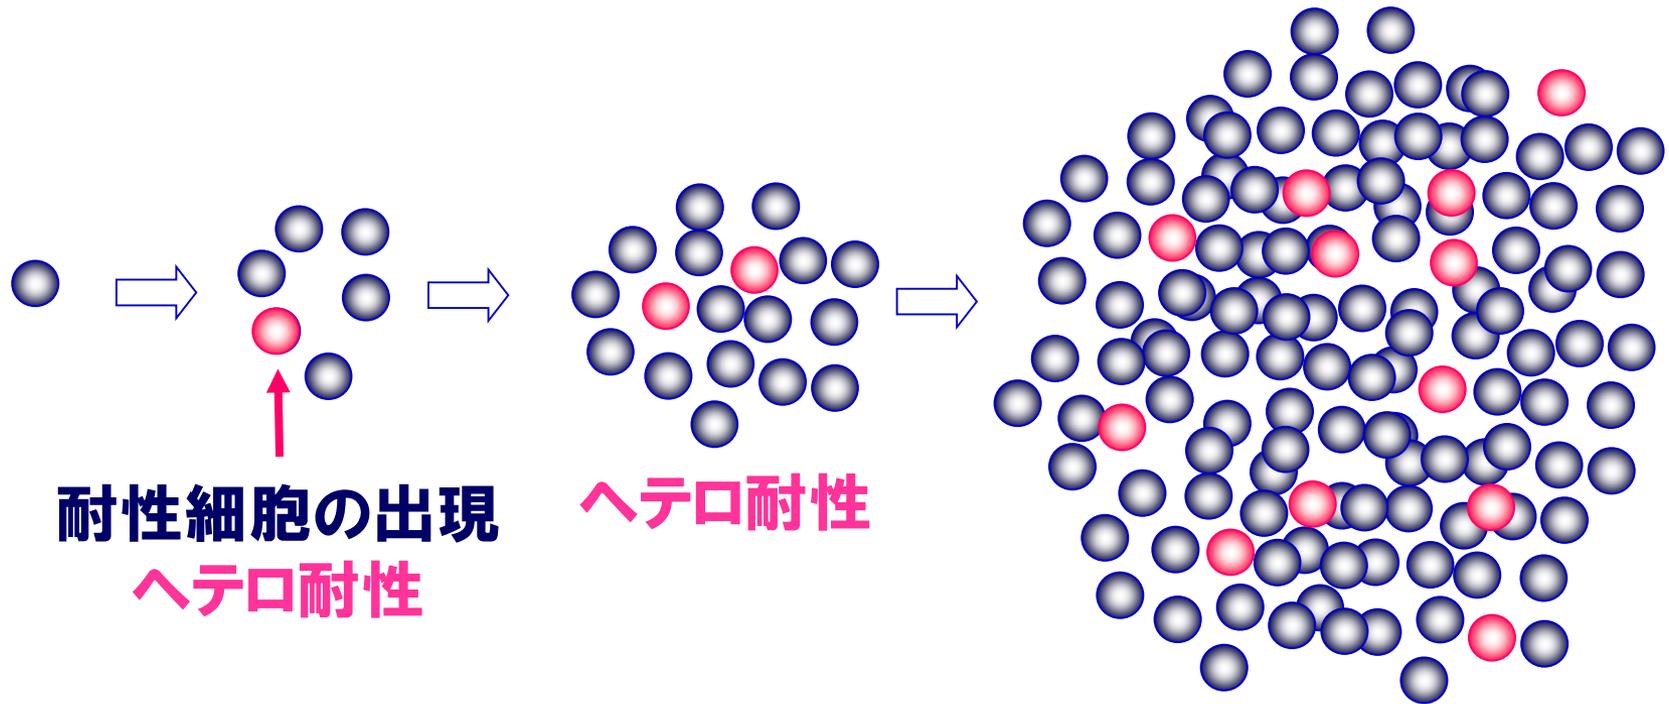

0.5

MICと残存菌数

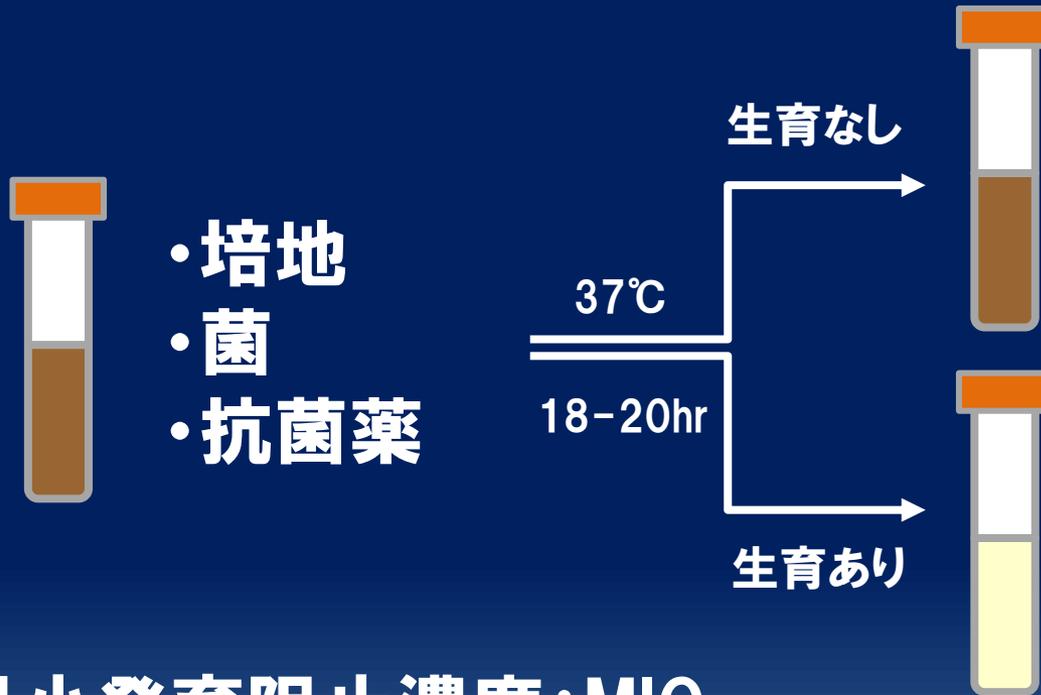

ヘテロ耐性：耐性細胞の出現

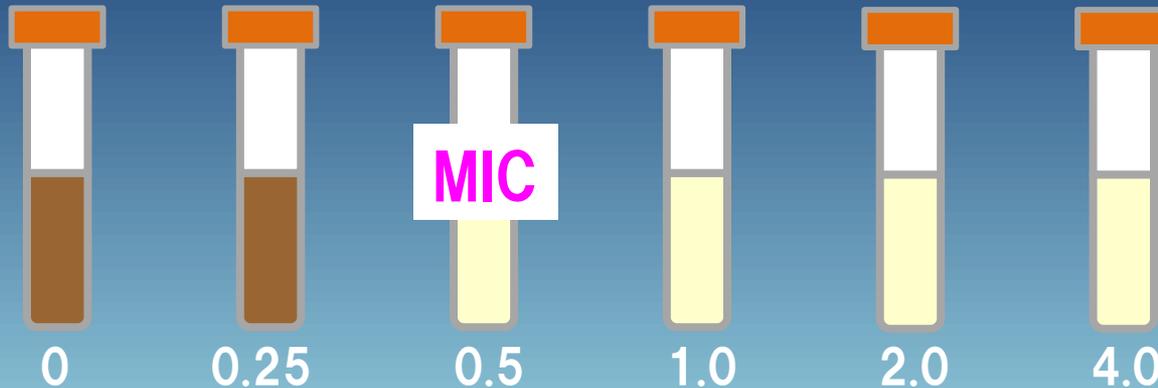

極少数の耐性細胞が存在する細胞集団

耐性化には必ずヘテロ耐性の段階がある。

MICの測定方法

最小発育阻止濃度: MIC

0.5

MICと残存菌数

≤ 100 万個/mL

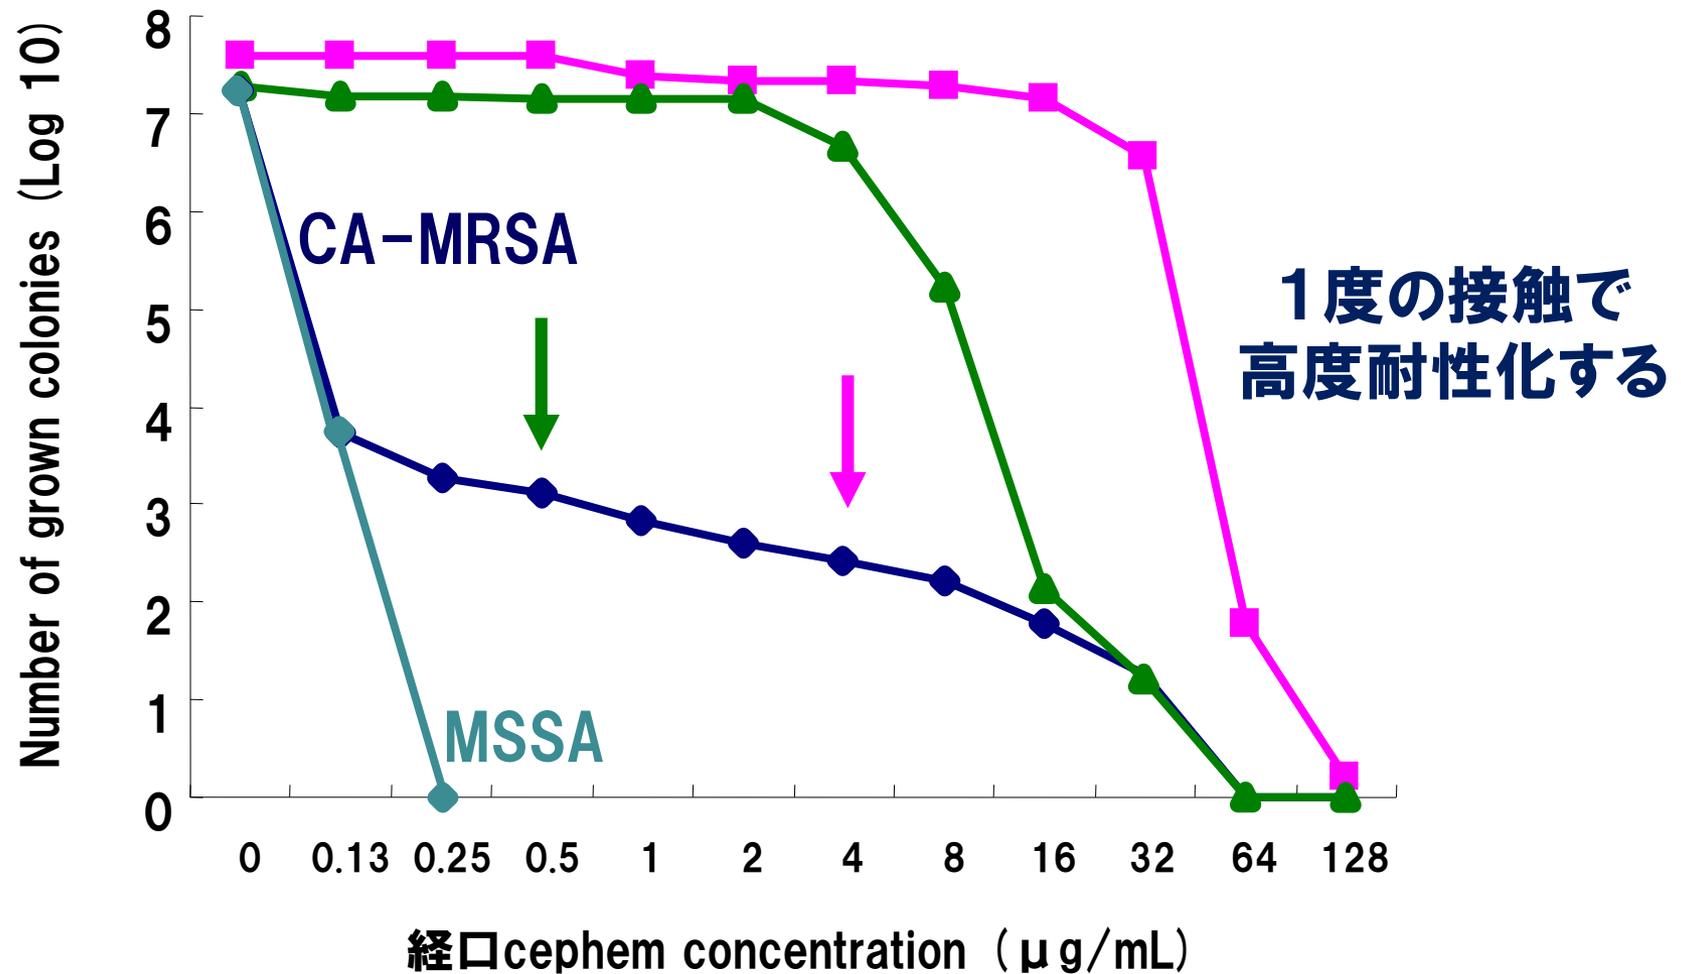

Population analysis

Population analysis of parent- and resistant colonies

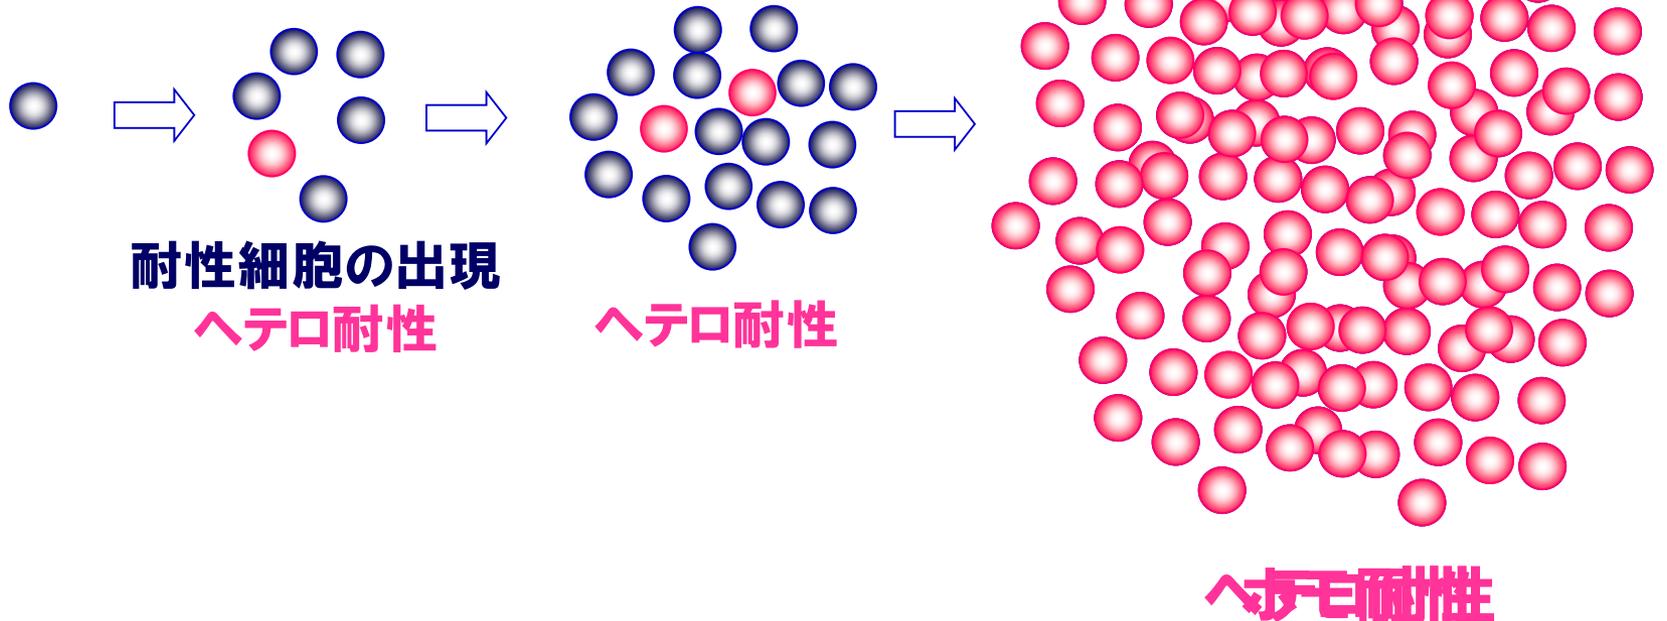

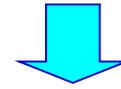

経口Cephem

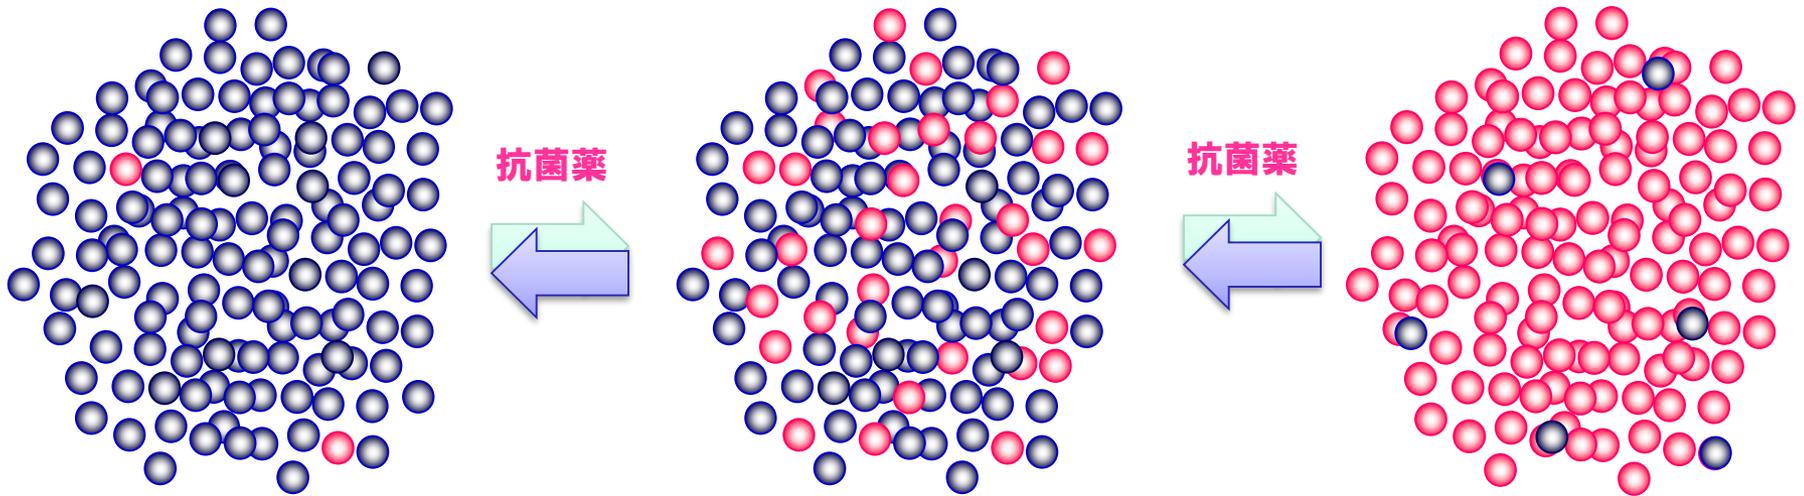

ヘテロ耐性から高度耐性へ

高度耐性菌の
増加は人為的.

グラム陽性菌に強力な
 β -ラクタム薬の投与

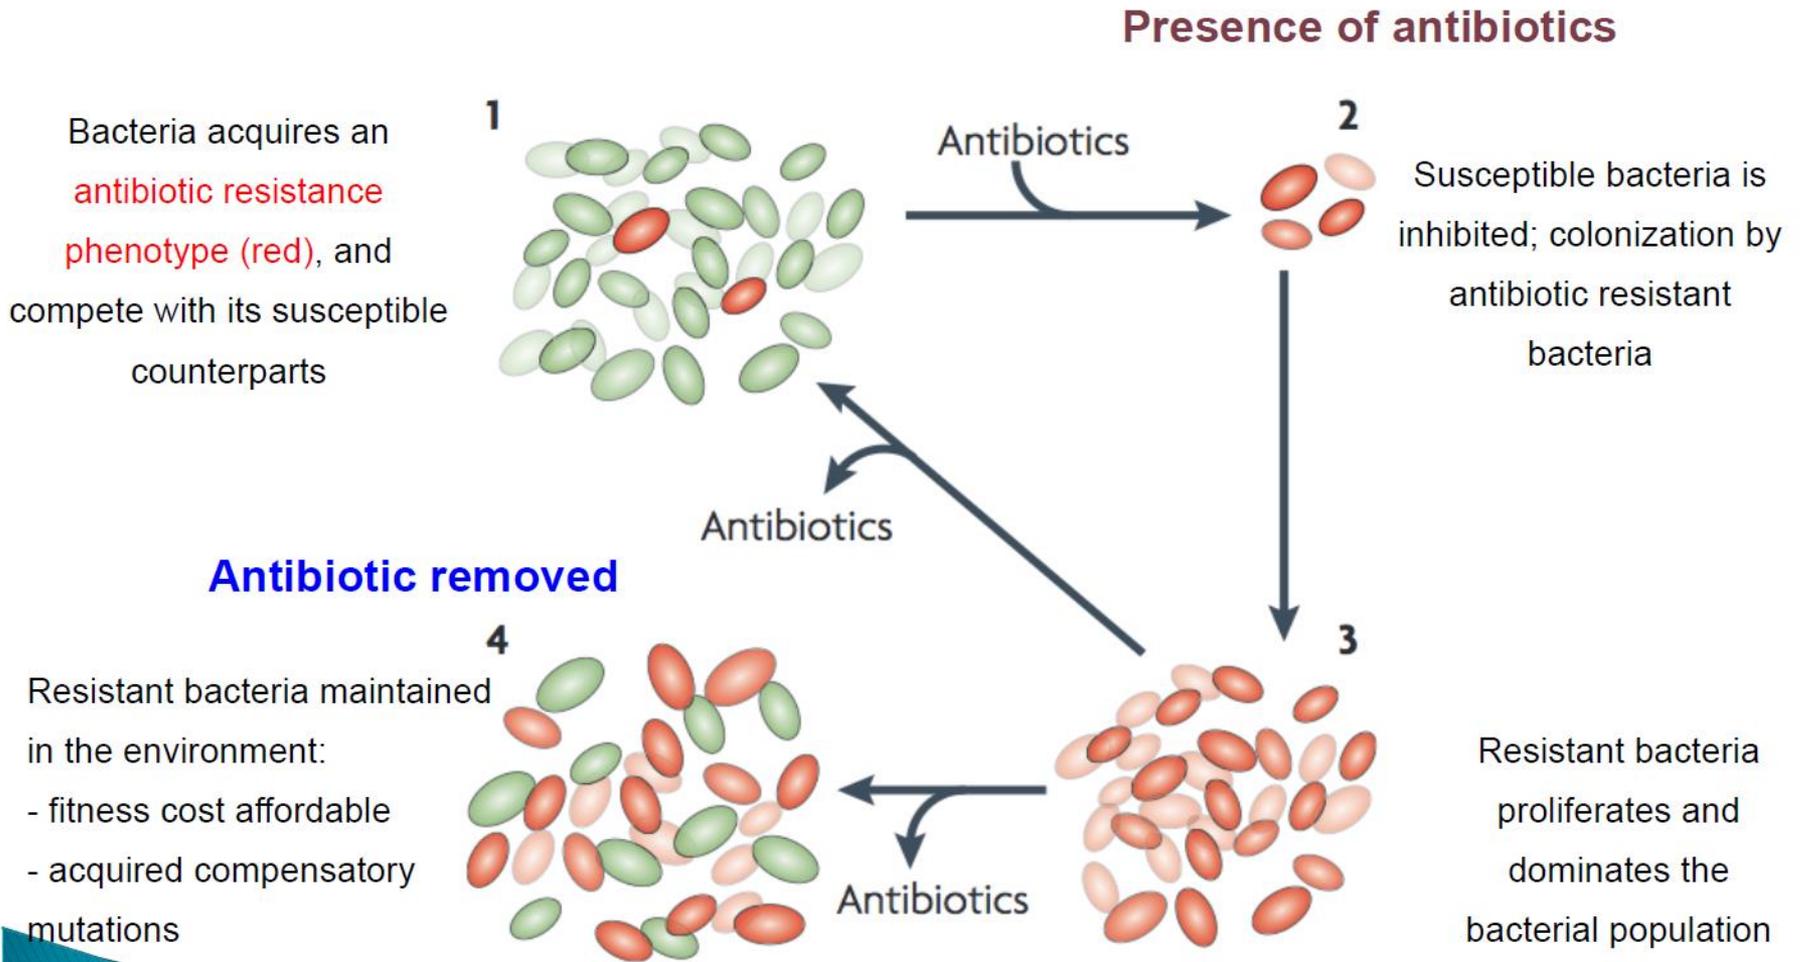

感性菌から耐性菌へ、耐性菌から感性菌へ

● 感性菌：増殖スピードが速い

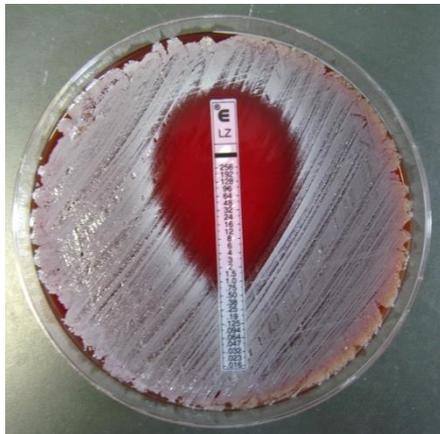

● 耐性菌：増殖スピードが遅い

How antimicrobial resistance can develop

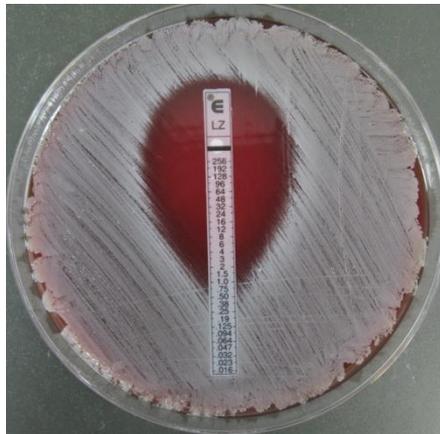

Linezolid耐性MRSAのE-test

HM429

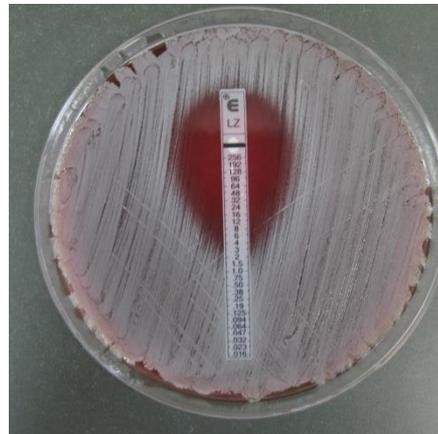

MIC 2 µg/ml

HM457

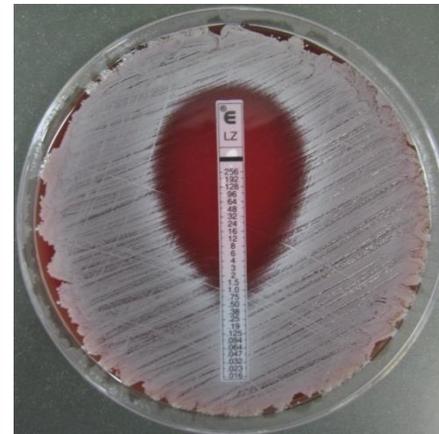

2 µg/ml

HM471

32 µg/ml

HM044

2 µg/ml
